Section V:

1. US-A-6 325 180 discloses an electro-mechanical screw actuator according to the preamble of claim 1, in which the satellite gears are accommodated on a flange of an inner ring. The present application seeks to reduce the number of components, which is achieved by providing that the satellite gear wheels are carried directly by the rotor by means of a plurality of axially protruding pins being provided on the rotor.

These distinguishing features are not known from any of the available prior art documents.
